Conflict Material update

This document declares that all **Castell Safety International Ltd** mechanical interlocks do not contain any conflict minerals and that these minerals are not necessary to the functionality or build of the products manufactured. However the circuit boards and lamps we procure from our sub suppliers, built into our electro mechanical interlocks may contain a very small element of either Tin or Tungsten that is required for our products to operate.

This document declares that all conflict minerals used in electro mechanical interlocks do not originate in the DRC or an adjoining country or come from recycler or scrap supplier. This document certifies that all Castell Safety International Ltd products are declared “DRC conflict free”.

It is the intention of Castell Safety International to always meet these requirements, as part of an ongoing ethical dimension to all business activities.
